Nebula

MVP Scope

1 Week Iteration Sprint

PREPARED BY: Sam Crosher

PREPARED FOR: Diarmid Roberts & Tim Huty

Functionality will be built using the content of this document.

Please ensure you have read and agree to this Scope Document before
booking your sprint in

PROJECT OVERVIEW

This is an overview of the purpose and goals of the iteration sprint. Specific details of updates to the application are outlined on the following pages.

This document outlines the high level approach for the Nebula MVP 2 sprint, focusing on enhancing the platform's functionality and resolving key technical issues based on client feedback.

The sprint will deliver improvements to Nebula's analysis capabilities, with the implementation of a parallel axis plot as a key feature. We'll also address several usability enhancements to the evaluation function workflow and resolve issues with the sampling processes that have been identified by users.

Data handling will be improved through updates to CSV storage and the addition of data filtering across variable types.

Throughout the sprint, we will work to implement all the requested features based on the information provided by the client, focusing on efficient delivery of the parallel axis plot and resolving sampling issues while ensuring all other enhancements are completed within the sprint timeframe.

KEY APPLICATION UPDATES

This is the complete list of updates that will be included in this iteration of the MVP. Any updates not represented here are outside the scope of the sprint.

High Complexity / High Priority

- Parallel Axis Plot: Custom built using D3 for maximum flexibility and control

Medium Complexity / Core Functionality

- Data filtering; adding a new layer in the analysis between results and plotting, operational on all variable types
- Sampling updates, including:
 - Adding differentiation between X and L variables during sampling,
 - How CSV data is added, stored and used,
- Bug fixes and clarifications of the existing functionality

Fixes, Corrections and Basic Changes

- Evaluation Function UX improvement, including; sorting, copying, saving and deletion
- Fix for analyses using random walk series
- Fix for assigning default values to analysis inputs
- Fix for persistence of CSV data, improvements in UI around the status of CSV inputs
- Spelling corrections
